It's been a while!We have been extremely busy with establishing our new manufacturing facilities and developing a line of new and exciting products, which we will henceforth be regularly keeping you abreast with.

## The KnK Trailblazer.

Thepopularity of off-road karting is growing worldwide. Karting facilities as we know themrequire surfaced tracks, which call for large capital outlays. The growing interest towards go karting has prompted us into bringing the excitement of go karting to small communities and rural areas at extremely reasonable costs. KnK Karts have developed a concept for go karting facilities that fit into financial outlays that are affordable and practical. Trailblazing, as this is new activity will be referred to, will permit karting activities to be started with budgets as low as Rs. 5 lakhs (approximately US\$ 7,500-10,000). Cost may vary based upon conditions and location.

The thought behind the concept for the excitement of Trailblazing means that it permits that the experience can be enjoyed on small sections of waste land or farm land that may only be used for seasonal crops. For the reason that it does not call for a permanent track, it can be set up almost anywhere, in the shortest period of time. With the incorporation of a few safety features, you can share and enjoy in the thrills of the adventure of Trailblazing by having a facility up and running, extremely short start up times.

The flexibility of the activity permits it to be moved to more lucrative grounds if the need arises.

To learn more about this exciting new form of go karting adventure you could visit our website at the address mentioned above or email us at enquiries@knkkarts.com and we will be happy to send you out some more information to set you on the path of becoming a Trailblazer.

A KnK Karts designed product, manufactured by our sister concern 'Pipe Accessories Mfg. Co.'
