Addressing the growing concern towards the safety of Gokarts used at amusement and entertainment gokarting centers, the CIK-FIA, the body that governs the sports of gokart racing realized the necessity to introduce a set of guidelines for manufactures so that the gokarts used at such facilities provided patrons and guests a safer environment to enjoy the excitement and thrills of rental karting.

At KnK Karts we were amongst the first manufactures worldwide to comply with these safety requirements, always having placed safety before any other consideration in the design and manufacture of our products. The result of this exercise are the KnK Colt-C16 and KnK Genesis SX6, which is the subject of this issue of Straight Forward.

Some of the features include;

- Roll Hoop
- Four Point Seat Belt
- Full Cover Axle shroud
- Floor Mounted Fuel Tank
- High Impact Guardrail with Suspended Absorption System
- All Splinter Proof Plastics
- Engine Shroud
- Spacious Floor Pan Area
- Extra Strong Chassis
- Impact absorbing replicable Crumple Zones

The SX6 is also available in a Limited Edition version, the KnK Genesis SX6-LE, which boasts a special anniversary look, commemorating India's 70 Years of Independence.
