We at KnK Karts have been busy over the last two months developing a brand new range of Go Karts keeping in mind the development that we are witnessing in this field. Looking ahead to the next year and in preparation for the introduction of a new range of KnK Karts for 2018, has kept us occupied.

Recently, we tested three new kart models, with a view towards how Go Karting is developing in the Asia Pacific region. Go Karting is enjoying a continuing interest and participation from new entrants to karting at different levels, from rental to racing as well as off-road karting.

We recently tested three models of these, which included an adult rental kart; the KnK Genesis SX8, the KnK Startkart and the KnK Ace Kart.

KnK Genesis SX:

Seen here, the KnK Genesis SX8, boasts features that makes this one of the safest Go Karts for rental kart tracks, boasting a new and stronger chassis and the new "Total Isolation Guardrail System" (TIGS) which works on the same principle of isolating impact as has been used in safety helmets for decades. A Roll Hoop, a Four Point Harness, a redesigned full coverage axle shroud, new "Throttle And Brake Operation Override" (TABOO) pedal system, are just some of the features that make the KnK Genesis SX8 one of the best rental kart available on the market today.

If you can find another rental kart with these features, at this price..... Buy it !!

KnK Startkart:

India and its neighboring countries have been contemplating a serious 4 stroke racing championship. A growing list of enquiries from amateur kart racing enthusiasts prompted us to lay down a platform based upon the technical regulation requirements for 4 stroke competition karting. The KnK Startkart is such a kart, built on the same platform of a KnK

Kart that won a Canadian 4 stroke National championship in 2010. Exclusively built for 4 stroke racing, powered by a race prepared Honda GX200 TAG Engine producing around 11 bhp, this highly tunable chassis makes it easy to race and setup for different tracks and conditions.

KnK Ace Kart:

The world is going IAME, the recommended platform for beginners' 2 stroke racing as is being encouraged by the CIK-FIA. The class is expected to be introduced in several countries, new to karting, in the near future. The KnK Ace Kart is a highly tunable professional race chassis that can be raced competitively in every class of 2 stroke racing, including the shifter class.

This chassis is presently not CIK Homologated.

These karts will be available from January 01, 2018. The KnK Genesis SX8 has already been shipped to a leading track in India and has been in use for the past one year at professional tracks in Australia, Sri Lanka and Israel.

These karts have proven to meet the demands for rental and race karting and will be commercially available from January 01, 2018.
